

Student Name _____

Driver Safety

Pre-assignment interview

Interview a parent or guardian or another adult whom you know well using the following questions about driver safety. Remember to practice good interviewing skills:

- ask for permission and time to conduct an interview
- show interest while the other person speaks
- hear what she or he says
- repeat their answer before writing it down
- make eye contact
- thank the person when finished

Questions

1. As someone who travels on the road (either as a driver or a passenger) how important is it to you that drivers are knowledgeable and drive safely?
2. As someone who does or will someday have a driver's license, what steps have you/are you taking to be sure that your own driving is safe?
3. How does safe driving relate to loving others and yourself?
4. How does physics help us practice this form of love?

Post-discussion follow-up

Now return to the person you interviewed and explain to them what you have learned about how an understanding of physics is part of how we figure out how to be safe on the road, and how that relates to being committed to the wellbeing of others and caring for ourselves. Please ask them to return this signed form.

My student, _____, took the time to explain to me the role of physics in safe driving and care for others.
